NEWS RELEASE

The Oil and Gas Conservation Commission will hold its next regular meeting Wednesday, April 24, 1968, 10:00 a.m., in the Palo Verde Room of the Stardust Hotel, 2350 - 4th Ave., Yuma, Arizona. This meeting is a public meeting and all those interested in oil and gas development in the State of Arizona are urged to attend. This Commission makes a policy of occasionally moving its regular meetings to various areas of the State so that the citizens of these areas may participate conveniently.

The recent discovery of large deposits of oil and gas in the northeastern part of our State has resulted in the largest number of exploratory holes drilled within our history. More recently discoveries in Washington County, Utah have created a great amount of interest in the oil and gas possibilities in the western section of our State.

Many companies have expressed interest to the Commission in Yuma County, and in particular the City of Yuma area and the Parker area. El Paso Natural Gas Company has in the past year leased in excess of 70,000 acres in the Parker area. Mr. Tom Hollenshead, Senior Geologist, Land and Exploration Department, El Paso Natural Gas Company, will discuss that company's current strat test program in Yuma County. Dr. Willard Pye, Professor of Geology, University of Arizona, will discuss briefly the oil and gas geology of the southwestern section of the State and the Commission will present a brief showing of color slides pertaining to the recent oil discovery on the Navajo

News Release April 12, 1968 Page 2 ()

Indian Reservation. Questions and discussion are invited from those attending the meeting.

0

Currently the chairman of the Oil and Gas Conservation Commission is Lucien B. Owens, Holbrook; Vice-chairman is George T.

Siler, Flagstaff. The members are: Lynn Lockhart, Springerville;

Kenneth G. Bentson, Phoenix; and Ralph W. Bilby, Tucson. Mr. John

Bannister is executive secretary and James R. Scurlock is its geologist.

OIL AND GAS CONSERVATION COMMISSION 1624 West Adams - Suite 202 Phoenix, Arizona

> Minutes of Meeting February 21, 1968

Present:

Mr. Lucien B. Owens, Chairman

Mr. George T. Siler, Vice Chairman

Mr. Ralph W. Bilby, Member

Mr. Lynn Lockhart, Member

Mr. John Bannister, Executive Secretary

Mr. James R. Scurlock, Geologist

Mr. David Rainey, El Paso Natural Gas Company

Mr. Robert Manning, El Paso Natural Gas Company

Dr. Willard Pye, University of Arizona

Mr. Mike O'Donnell, O'Donnell & Ewing Drilling Co. Inc.

Chairman Owens called the meeting to order at 9:30 a.m. Minutes of meeting of January 17, 1968 were approved.

Mr. Bannister officially stated appreciation to El Paso Natural Gas Company for its preparation for the Commission of the gas well backpressure testing manual for use in testing Arizona's gas wells.

Mr. Rainey cited the history in preparation of the IOCC manual and hte New Mexico manual in standardizing testing procedures across the nation. Mr. Owens expressed the appreciation of the Commission and directed Mr. Bannister to write a letter of appreciation to El Paso Natural Gas Company for its action in supplying manuals to the Commission.

It was decided that the next regular meeting of March 20, 1968 be held in Yuma and Mr. Bannister was directed to make necessary arrangements. It was further decided that tentatively the regular meeting of April 17, 1968 be held in Cochise County, with Bisbee as the possible site, depending upon the activity in that county; and that the May and June regular meetings possibly should be held in Phoenix, and then possibly the July meeting should be held in Holbrook, the area of helium activity.

Meeting adjourned at 11:40 a.m.

APPROVED APRIL 17, 1968

Memo to: Commissioners

From: John Bannister, Executive Secretary

Re: Report of Activity

On November 15, 1967 the Commission issued Order 30 approving the Pinta Dome Unit. Through inadvertence I failed to include in our findings that the required percentage of working interest and royalty interest owners had executed the unit agreement. This oversight is corrected by a nunc pro tunc order, a copy of which is attached. The effect of this order is merely to show that the Commission did find that the required percentages had executed the unit agreement and that the finding is now a matter of record.

I attended the Southwest Legal Institute annual meeting in Dallas on April 4-5. This institute covered such subjects as unitization on federal lands, laws concerning conflict of interest, titles, taxation in the industry, a summary of Gasbuggy, etc. In addition to attending the meetings, I was able to talk with several oil companies in the area, all of whom indicated a renewed interest in Arizona, specifically due to Dineh bi Keyah and the recent activity in Cochise County. It is my feeling that such meetings as this should be attended as funds will permit.

Leasing activity has somewhat slowed down in the State; however current interest seems high in the Cochise County area. Basin Petroleum #1 Davis Clark operations have been suspended pending a study of the situation by the operator. We do not as yet have indications as to whether or not Basin intends to pursue further drilling activity in this area.

It is interesting to note that most companies and independents feel that at some time Cochise County will become a valuable producing area. However inasmuch as greater depths are involved in reaching production, this area will be somewhat slow in developing. The leasing activity in the area is encouraging.

Our 1968-69 budget appropriation has been confirmed and I am pleased to report that the Commission was treated kindly this year. The raises authorized by the Commissioners at the time we tried for the supplemental budget will go into effect May 1st, due to availability of some salary monies primarily resulting from the

cancellation of the regular monthly meetings.

In addition, the Commission will have money to put on the necessary additional personnel during 1968-69; these are a steno and one office man. This of course will be discussed with you at our next regular meeting. It is contemplated that this personnel can be hired to commence approximately August 1.

We have also been allowed sufficient capital outlay money to purchase a desk and chair for the new man. Inasmuch as our offices are now crowded, we are presently contemplating housing the new man and steno in our small conference room.

As you recall, we have discussed at length backpressure testing of gas wells, as called for in our rules and regulations, without venting gas. As reported, we have worked closely with Red Walsh to work up the necessary instructions. We now have proofs of the Commission's instructions.

Basically, the manual of backpressure testing by IOCC will be used. Inasmuch as this manual was issued on a pressure base of 14.73 psia and Arizona's pressure base is 15.025 psia, it was necessary to make certain adjustments. As you will again recall, a supplement to this manual was prepared by El Paso Natural Gas Company and furnished to this Commission.

In order to put this into effect it was necessary to devise two new reporting forms. Inasmuch as our Rule 401 gives the Commission authority to indicate the method in which these tests be conducted, it was not necessary to hold a hearing to institute this procedure. The forms and manuals will be available for your review.

You will note from your copy of the agenda for the Yuma meeting that we have a speaker from El Paso Natural Gas Company who will talk briefly on the tests being drilled in Yuma County. These tests are primarily to confirm the existence of an underground reservoir for storing gas. We feel such a talk will be of particular interest to people in Yuma County.

The business portion of the meeting will commence at 9:30 and the public interest meeting at 10:00 a.m. Reservations have been made for all indicating their attendance at the Stardust Hotel in Yuma for arrival on Tuesday, April 23. We will have a informal, pay-for-your-own get-together as usual on Tuesday evening April 23, in the Stardust. Should you have any questions concerning this meeting, please advise.

GEOLOGIST'S REPORT

Dineh bi Keyah Field

Humble #88-1. This well encountered the Pennslyvanian sill.

Produced no oil but made up to 3,000,000 cubic feet of non-combustible gas. Well was squeezed and lower part of the sill was fractured and again put on production, this time making about half million cubic feet of gas. Well presently swabbing about 10 bbls load oil per day. Still have 300-400 bbls of load oil to recover. If well continues to swab at this rate, will probably request TA (temporary abandonment) status.

Humble #88-3 Well had been put on pump. Looks good. Will probably complete next week.

date			pumpe	
April	14	144	bbls	oil
17	15	166	11	11
11	16	144	11	11
11	17	147	11	11
17	18	143	11	11

Humble #88-4

Well recovered small amount of gas; no oil. Is now

Th. May want to use this well in the future as a

water disposal well...or perhaps will try again to
complete.

Has no rig working in the field at present. Oil runs this month will suffer a bit as a result of weather. Snow last night (Thurs. night) piled up 3 inches at the Kerr Mc yard (elevation 7500'), 6 inches at the # 6 well (elevation 8317'), and field vehicles with chains could not climb to the # 13 and #14 wells (elevation 8500.)

Wildcats

- Humble 146-1 (tight hole) Helium producer from Devonian. Well has been turned over to the production department for testing. (Well located 4 miles SE Dineh bi Keyah)
- Humble 151-1

 Have moved in completion rig. Perf. Cambrian sand 3836-60. Swabbed down. Flowed gas and mud. Began flowing gas and water. (Thought to be formation vtr.)

 Have run pressure bomb. Well presently shut in to determine bottom hole pressure. Plan to continue to shut in and flow well for various periods in order to determine deliverability rate. If well cannot be completed from this zone, will come up hole and test higher zones. Presently moving in test equipment. (Well located 6 miles SE Dineh bi Keyah Field)
- Hallett Dev. Co. #1 State 10603 (NE NE Sec. 36-19N-26E, Apache Co.)

 Operations ceased. Well capped. Shut down. May want to come back and attempt completion. Meanwhile have moved rig to Sec. 28 (Hallett #1 State 10602)
- Hallett Dev. Co. #1 State 10602 (2640 FNL, 1658 FEL; 19N-30E; Apache Co.) Moving in rotary rig. (Tom Wheat; phoenix)
 Well located 3 miles south of Pinta Dome.

Arizona is in fine shape in this regard. Dur rules will prevent physical waste but not hamper production. Is New times demand a new

EDITORIAL

conservation approach

THE CONSERVATION SYSTEM of virtually every producing state is due for a thorough reexamination and possibly drastic overhaul during the next couple of years.

The impetus will not be primarily the attacks on conservation made by theoretical economists, nor the potential threat of federal action, though these may be a bit of a spur.

Revisions will be forced by the necessity to maximize crude production as market demand approaches producing capacity.

OUR PRESENT SYSTEM was forced into being by the pressure of an overwhelming surplus of crude oil and producing capacity.

It did prevent physical waste at a time when the industry was not much concerned with that problem. But its primary objective was to curb outright wasteful practices, rather than to develop and encourage positive ways and means to improve the conservation of oil and gas production.

Now the situation seems headed for a reversal. During recent months the system has been strained to meet market needs, and many areas found to their shock that they no longer have surplus producing capacity.

If present trends continue it seems inevitable that within a year or two the nation's surplus crude capacity will be confined to a handful of giant fields in two or three states. The rest of the wells should find a market for all they can produce without waste.

So the regulatory emphasis should shift from curbing a surplus to preventing a shortage. The system must encourage discovery of new reserves, creation of new capacity, and production up to the maximum efficient rate of recovery.

This involves considerably more than just setting a high allowable factor. The fact that many wells can't make these high allowables shows that the system needs thorough-going revisions.

Most states have a crazy-quilt patchwork of formulas, exemptions, and obsolete rulings crying for simplification and updating. Both the need and the opportunity to make changes are now at hand.

Prime subjects for study include a practical definition of MER, a rational revision of depth brackets, elimination of the well factor in allowables formulas, easier unitization, and perhaps proration on the basis of reserves attributed to the acreage.

INDUSTRY MUST take the lead in this, not only in prodding the state authorities to move faster, but in lending technical know-how and manpower for forward-looking studies.

We can defend conservation as having served well under conditions of the past — but still recognize that it needs a change of orientation to serve the nation and the producing industry more effectively under the sort of supply-demand relationships that loom ahead.

AND GAS JOURNAL . MARCH 18, 1968

39

Oil and Gas Conservation Commission

STATE OF ARIZONA

1624 WEST ADAMS

Phoenix, Arizona 85007

PHONE: 271-5161

March 12, 1968

Memo to: Commissioners

From: John Bannister, Executive Secretary

re: Report of Activity

The Navajo lease sale of February 27, 1968 is generally considered as most successful, particularly as to the Arizona portion. You have previously received the report concerning the bid activity.

The Oil and Gas Journal and other trade publications are predicting continued and more active exploration in this area in particular and in Arizona generally.

As you have been notified, the next regular meeting, scheduled for Yuma on March 20, 1968, has been cancelled due to lack of quorum and it is anticipated that we will now schedule our April 17 meeting in Yuma. You will be contacted prior to that date so that reservations may be confirmed. Again, it is anticipated that as many as possible will bring their wives.

It is interesting to note that Basin Petroleum Corp., Oklahoma City, has re-entered the old Southwest Oil Company #1 Davis-Clark well, located southeast of Tombstone. This operation began about March 9 and I will check this well later this week and of course will furnish you with a report.

This well together with the recent leasing activity in Cochise County is creating much interest in this area of our state and of course if the well is successfully completed will generate further tests this year.

A major oil company, whose identity is unknown to me at this time, has taken approximately 30,000 acres of the lease play recently in Mohave County. This is somewhat more than one-half of the acreage taken by Tom Connally and Tom Moran. These two brokers still retain in excess of 20,000 acres in this area.

As you may be aware, Buttes Gas and Oil is drilling an offset to the Pease well, which is north of the Arizona-Utah border. Of course a confirmation by this well will greatly enhance the Arizona portion of this structure.

Some hundred miles north of the Pease well O'Donnell & Ewing is

The Carlotte Line

drilling an offset to the Gould well. The original Gould well had significant shows of oil and gas, but had difficulty in cementing off the water in the production zone. It was temporarily abandoned pending the success of this new offset. If the offset is successful undoubtedly the old well will be re-entered.

The northern end of the structure, from Mohave generally northwest into Utah, will have been proven. Should both the Pease-Buttes wells and the O'Donnell-Gould wells prove successful, we will see tremendous activity in western Utah but also in Mohave County.

There have been some rumors of potential drilling in Mohave County regardless, however, this has not as yet been confirmed.

It is hoped that some time within the next two weeks or so I can accompany Mr. O'Donnell through the Utah portion of the structure. If I am able to accomplish this I will be able to view the full structure as well as visit the two Pease-Buttes wells and the two Gould wells. We are frequently requested to furnish information concerning these wells in relation to Arizona geology and this trip will be well worth the effort.

In the Dineh bi Keyah Field Humble has at last tied in pipeline to all its production and is no longer faced with undue expense of trucking. This of course will make more profitable a picture for Humble and could encourage their exploration.

It is interesting to note that in the Dineh bi Keyah Field Kerr-McGee has completed one new producer and Humble has two new producers, and there may be possible another new producer for Kerr-McGee in the near future. This will give us a total of 17 producers in that field.

Humble's #1-146 well, SE SW 15-35N-30E, has been temporarily abandoned as a potential helium well. Recently the Helium Activity of the Department of Interior has announced the closing of two helium plants, one in Otis, Kansas and one being the Shiprock, New Mexico plant. It is reported that the Shiprock plant will be taken over and operated as a private enterprise.

I expect that sometime this year Kerr-McGee will make a decision concerning the helium being found on the Dineh bi Keyah Field and that some arrangements will be made either to take this helium-bearing gas to the Kerr-McGee plant in Navajo or to construct a plant in the Dineh bi Keyah area. Of course there is also the possibility that if the Shiprock plant is taken over by private enterprise, gas could be moved over to this plant.

There has been no change in status concerning the Harless situation. While attending the Navajo sale in Window Rock I had the occasion to talk to Mr. John Anderson of U.S.G.S., Roswell. He indicated that sometime in April he will request a meeting of U.S.G.S., Harless, and this office wherein U.S.G.S. will give Mr. Harless the alternative of either plugging the wells immediately or their going to the bonding companyies. As I have pointed out, U.S.G.S. does not have the court review of their actions as does this Commission.

As of this time apparently all three of the bills before the Legislature on behalf of this Commission are dead with no chance of passage. From all indications many bills are going to be lost due to internal friction within the Legislature. One of the governor's aides confidentially informed me that the governor is most displeased with the actions of the present Legislature in that so many bills, along with ours, are lost in the squable.

At the first available opportunity we should again request the legislation sought in HB-176 (Registrar of Contractors) and in HB-177 (levy, etc.).

With our failure to secure additional revenue for the remainder of the 1967-68 fiscal year, we of course will have to be most careful of all future expenditures. We are particularly low in State-Travel and in Professional Services. It will be questionable that in the event of a hearing is necessary the Commission will have sufficient funds to support it. I have taken the liberty of notifying both the Legislature and the Governor's office that our functions may have to be curtailed.

George Siler and I attended the official dedication of Arizona Helium Corporation's new plant in Navajo. The opening was attended by some 300 people. In general, those in attendance were stockholders.

The plant at this point was capable of making perhaps 50% pure helium in that at least one heater exchange was lacking. Also, the plant was not equipped to deliver helium into a truck.

The full completion of the plant should be accomplished by the middle of April. It is anticipated that the first truck loads of helium will begin early in that month.

New Permits:

454: Humble #1 Navajo 151, SE NE 35-35N-30E, Apache County

455: Champlin #1 Navajo 171, NW SE 4-37N-25E, Apache County

456: Basin Petroleum #1 Davis-Clark, NE NE 5-215-24E, Cochise County

Geologist's Report

WILDCAT ACTIVITY

Champlin #1 Navajo 335 (Sec. 4-41N-29E) Apache Co....
Plugged and Abandoned.

Humble #1-146 Navajo (SE SW Sec. 15-35N-30E) Located 4 miles southeast of Dineh bi Keyah Field. Temporarily abandoned. Total depth 3929. Helium in the Devonian. Confidential.

Little #1 Navajo (SE SE Sec 26-6N-8W) Located 20 miles southwest of Dineh bi Keyah Field. Total depth 2315 ft. in pre-Cambrian.

Basin Pet. #1 Davis-Clark (NE NE Sec. 5-218-24E) This is a farmout to Basin Pet., Dilco (a partnership), and Jack Choate from Southwest Oil Co. (a corporation from Casa Grande, Ariz.).

Basin has brought in a work-over rig (Beckman, Inc., from Odessa, Tex.) and has re-entered the old hole which was drilled as the Southwest Oil Co #1 Davis-Clark in 1956 to the Devonian Martin formation at a total depth of 3570 ft.

Basin has washed down the hole, run gamma ray neutron log; ran 4 1/2 in. cdg.. Presently prep to perforate and water frac.

Well located 6 1/2 miles SE Tombstone.

Humble #1-151 Navajos (SE SE Sec. 35-35N-30E) Located 6 miles southeast of Dineh bi Keyah Field. Well originally located in SE SE Sec. 26-35N-30E. Spudded 3-10-68. Contractor is Mesa Drl. Tight Hole.

Hallett #1 State 10603 (NW NE Sec 36-19N-26E)

Top Coconino 1354 ft.; cored and ran drill stem test; no show. Total depth 1362 ft. Will drill about 10 ft. deeper and test.

Champlin #1 Navajo 171 (NW SE Sec. 4-37N-25E) Located 6 miles southwest of Rock Point. Farm-out from Pan Am.
Elev. 5205 KB; Contractor Cactus Drl. Co.; Set 13 3/8 in. Csg. @ 334 ft. w/400sx.; Spudded 3-5-68; top De Chelly 1604 ft.; Drilling 2970 ft. Well is tight,

WELL SAMPLES - CORES

All samples and cores for the Commission shall be handled, until further notice, as follows:

Samples

- (1) All samples shall be properly washed and dried.
- (2) An amount, the equivalent of two tablespoons, of each sample shall be placed in envelopes or other suitable wrapping and clearly identified as to the depth at which it was taken.
- (3) Samples shall be properly packaged for transporting in a manner that will protect the individual samples; each pack of samples shall contain the identification of the well from which the samples originated, the complete location of the well and the Commission's permit number.
- (4) Samples shall be shipped or mailed, charges prepaid, as below directed:
 - (a) Samples of all wells to:

Arizona Bureau of Mines University of Arizona Tucson, Arizona 85721

(b) In addition to (a) above one sample set of each well in Apache, Navajo, Coconino, Mohave, Gila, and Yavapai Counties to:

Museum of Northern Arizona P.O. Box 402 Flagstaff, Arizona 86001

Cores

(5) Core samples may be furnished in chips and suitable packed as set forth in Para. 2 and 3 above. Core samples shall be shipped or mailed, charges prepaid, as indicated in Para. 4 above.

March 1, 1968 D-1-68

It may be more convenient for you to deliver the Commission's samples to Four Corners Sample Cut, P.O. Box 899 (641 W. Broadway), Farmington, New Mexico 87401, and contract with it to prepare and deliver the Commission's samples in accordance with these instructions, billing your account for the cost of this service.

When you deliver samples or cores to the Arizona agencies or to Four Corners Sample Cut, the Commission is to be notified of the date of delivery and of the well from which the samples were taken.

Memo to: Commissioners

From: John Bannister, Executive Secretary

re: Results of Navajo Oil and Gas Lease Sale

Attached please find the results of the Navajo oil and gas lease sale at Window Rock, February 27, 1968, at 10:00 a.m.

The sale was lightly attended with only approximately 25 people being present. Again, this did not reflect the total number of individuals bidding.

The attached report reflects only the Arizona portion of the sale. No bids were received on the Utah portion and but light and scattered bidding on the New Mexico portion.

For comparison purposes, the last Indian sale of September 26, 1967 resulted in the sale of 47,900 acres of Arizona land with a total bonus of \$439,000.00. The average bid at this sale was \$9.10 and the high bid by Skelly 0il Company was \$44.46 per acre.

In this sale of February 27, 1968 the Navajos offered 191 tracts containing 123,273.56 acres. Of this land offered, 129 tracts containing 83,709.18 acres were taken. The total number of bids received for this acreage was 264, of which of course only 129 were successful.

The overall price per acre for the successful bids was approximately \$9.75, or approximately 65¢ per acre higher than the last sale.

The low successful bid of this sale was the Big Piney Oil & Gas Co., a bid of \$2.56 per acre for a total of \$1,638.40. The highest and most spectacular bid of the sale was by Pan American Petroleum Corporation for Section 1, Township 35 North, Range 29 East. Pan American's bid was \$250.13 per acre for a total of \$160,083.20. This acreage is a direct offset to production from Dineh bi Keyah Field to both the north and east, and is of course the closest acreage offered to the producing area.

It is interesting to note that whereas Humble did not bid in the former sale, nor did Kerr-McGee, that in the current sale Humble bid successfuly on six tracts for a total of 3,840 acres at a cost of \$102,956.80.

Kerr-McGee submitted but one bid, \$17,062.40, and this was on the same acreage that Pan American submitted the high bid of the sale.

The second highest bid on this same tract was Gulf's \$79,180.80, being \$123.72 per acre.

W.T. Blackburn, independent from Denver who frequently bids for Humble, was the successful bidder for a little over 12,000 acres. It is unlikely that at this sale Blackburn was bidding for Humble.

Other interesting bids were Corrine Grace who submitted bids totaling \$79,052.80 on 1,920 acres. Corrine Grace represents the Grace Steamship Lines money and is located in Phoenix.

Another newcomer to the sale was Odessa Natural Gas Company. This company is a wholly owned subsidiary of El Paso Products Company, which of course in turn is owned 100% by El Paso Natural Gas Company. Odessa Natural Gas was the successful bidder on 20 tracts containing 12,657 acres, at a total of \$68,805.90.

A recap of the more successful bidders is listed on the attached sheet. If you have any questions, please do not hesitate to ask.

R E C A P

Oil and Gas Lease Sale Navajo Tribal Lands February 27, 1968

Offered 191 tracts - 123,273.56 acres Taken 129 tracts - 83,709.18 acres \$839,159.71

WORLD OIL FEBRUARY 1, 1968

Looking Ahead

Competition increases for nuclear projects... Even before feasibility of nuclear well fracturing is proven, new firms are emerging to develop and promote peaceful uses of nuclear explosives. Nobel-Paso Geonuclear is a new international firm to be formed for operations outside U.S. by El Paso Natural Gas Co., Nobel Bozel of France, and Pondreries Reunies of Belgium. Latter two firms are European explosives manufacturers. Other new entries, all slated for Wyoming:

Thunderbird, nuclear project on 100-square-mile block of Wyoming lands in Powder River basin, to tap estimated 20 billion tons of coal with Btu content equivalent to 60 billion barrels of liquid hydrocarbons or synthetic fuels. Proposal, put together by Wold and Jenkins, Wyoming coal exploration firm, is being discussed with federal agencies. Objective: cooperative research effort with private industry.

El Paso Natural Gas has requested consideration of nuclear test in Green River basin tight gas sands, at 11,000-14,000 feet.

WASP (Wyoming Atomic Stimulation Project), has been proposed for same Green River basin area. Plan was developed by group of small firms, headed by Wolf Exploration Co., Denver, Participating companies include Oil and Gas Futures. Inc., Beilaire, Texas: Planet Oil and Mineral Corp., Dallas; W. G. Peavy, Dallas; CRA, Inc., Kansas City: Burnham & Co., New York.

Meanwhile, work continues on Gasbuggy. After cleaning out emplacement hole, finding top of 333-foot high nuclear-blasted chinney at 3,907 feet and dismantling clean-out rig, AEC recovered four samples of chinney gas via wireline. Lawrence Radiation Laboratory, under contract to AEC, will analyze samples, determine type and amount of radioactive contamination. Depending on analysis results, production testing of chinney gas by El Paso Natural Gas will take place in 6-9 months.

What technology means to the petroleum industry... National Petroleum Council's 341-page "Impact of New Technology on the U.S. Petroleum Industry, 1946-1965"—now off the presses—is loaded with interesting statistics. For instance:

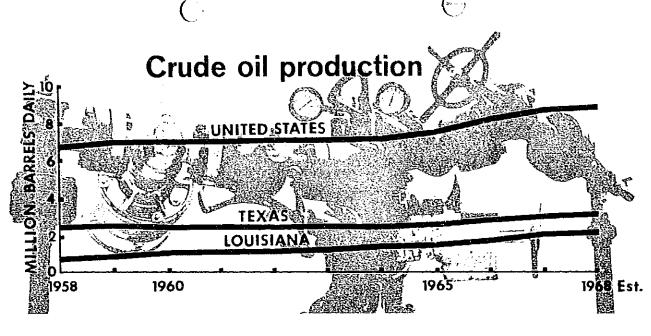

- Technological breakthroughs and cost reduction efforts in exploration, drilling and production resulted in annual cost savings of 85¢-\$1.00 per barrel of eil produced in 1965, compared with 1946.
- Improved drilling methods, alone, reduced costs about 35¢ per barrel; production methods, 32¢; corrosion control, 9¢; wider well spacing, 17.5¢-35¢ per barrel.
- New breakthroughs are expected in future years. And they will be needed. NPC estimates
 that if industry is to meet U.S. oil demands through 1970's, about 6 billion barrels of oilin-place must be discovered annually. This would be 25% more than discovery rate of past
 7 years.

Will ail investments shift to Western Hemisphere? . . . Three developments give rise to increasing speculation that U.S.-based international oil firms will shift investments, to some degree, from Eastern to Western Hemisphere in 1968: (1) perennial political instability in some Eastern nations; (2) declining investment returns since 1963 (First City National Bank of New York reports investment return of seven international oil firms with major operations in Eastern Hemisphere has been below average for domestic companies since 1964); (3) Administration's move to reduce overseas investment.

These factors, combined with excellent drilling prospects in Canada, South America, Mexico, and U.S. offshore, may well add up to drilling revival in Western Hemisphere.

WORLD GIL

FEBRUARY 1, 1968

Further rise in U.S. crude output foreseen

Following sharp increases in 1966 and 1967, U.S. crude oil production probably will rise further in 1968, although more gently. In each of the years 1966 and 1967 the crude cutput jumped about 500,000 barrels daily or over 6 percent, making an increase of about 1 million bpd or almost 13 percent within two years. The production averaged 8,809,438 bpd in 1967, latest reports show.

In 1968 the crude output may increase only about 1.2 percent or 106,-000 bpd to approximately 8,915,000 bpd. Demand for petroleum is expected to increase about 3.2 percent. But much of the extra demand will be met by increases in imports and production of natural gas liquids.

The 1967 crude output of 8,809,438 bpd was an increase of 514,197 bpd or 6.2 percent over that of 1966. The increase occurred primarily through a combined gain of 504,138 bpd in the four largest producing states, Texas, Louisiana, California and Oklahoma.

Some other states also recorded increases, including notably a gain of 39,411 bpd in Alaska and smaller rises in Arizona, Colorado, Mississippi, New Mexico and New York.

On the other hand, there were decreases in Alabama, Arkansas, Florida, Illinois, Indiana, Kansas, Kentucky, Michigan, Montana, Nebraska, Nevada, North Dakota, Ohio, South Dakota and West Virginia.

Louisiana showed the largest increase. Its production of 2,128,471

108

FOLLOWING SHARP INCREASES in bpd in 1967 was up 281,024 bpd or put of 3,067,580 bpd showed a gain 966 and 1967, U.S. crude oil pro- 15.2 percent from 1966. Texas out- of 169,756 bpd or 5.9 percent.

U. S. Crude Oil Production, by States and Districts, 1967 and 1966 (Source: U.S. Bureau of Mines, except last 3 months of 1967 API, and Texas districts from API)

Seven area depth records were broken during 1967

THIRTY-FIVE WELLS were drilled below 20,000 ft, in 1967, about the same number as in 1965 and 1966.

The deepest well drilled in the United States last year was Humble Oil and Refining Co.'s Henry Willbanks 11 in West Texas' Gomez field, Pecos County, with a TD of 23,564 ft. It was completed as a 14 MMcfd gas producer at 21.883-22,610 ft. However, the West Texas record holder still is Phillips University EE-1, wildcat, dry at 25,340 ft. in 1958.

Regional depth records set in 1967: South Louisiana offshore: Gulf Oil's S.L. 3529, No. 7, having set a new depth record at 21,452 ft. in West Delta Block 27 by December 31, was still drilling at 22,642 ft. on January 19. The previous record holder was Ocean Drilling and Exploration Co.'s S.L. 3763, No. 5,

Block 16 field during 1966. Texas Panhandle: Union Oil of California's Bradstreet Unit 1-89 in Hemphill County reached TD of 20,-042 ft., exceeding the 18,080-ft. mark Corp.'s J. E. Merritt 1 in 1966.

drilled to 19,400 ft. in Vermilion

set in 1965 by Phillips' Dyson 1A in Wheeler County.

Colorado: Mobil's Piceance Creek 52 in Rio Blanco County set a new record at 19,710 ft., replacing Kerr-McGee and Humble's Uravan 1, drilled to 18,354 ft. in 1963.

Utah: Mobil's Gregory F-44-21 in Summit County set a new depth mark at 16,670 ft., surpassing Pan American's 16,237 ft. Pace State 1, Grand County, drilled in 1964.

Arkansas: Humble's 16,611-ft. Georgia-Pacific 1 in Ashely County established a new record below the 13,837-ft. mark set in 1965 by Midwest Oil's USA 1 in Logan County.

Ohio: The state's first well drilled below 10,000 ft. was Amerada's Robert Ullman 1 in Noble County, with TD of 11,442 ft. The previous record of 8,622 ft. was set in 1961.

Tennessee: Gulf Oil's 10,748-ft. Spinks 1 in Henry County is more. than 4,700 ft. deeper than the old record of 6,021 ft. set by Benz Oil

Holders of Record as Deepest Test Drilled (Includes Both Dry and Producing Wells)

Year	Company, Well and Location	Feet
1927 1928 1929	Chansler-Canfield-Midway Oil Co.'s Olinda 96, Olinda, California Texon Oil and Land Co.'s University 1-B, Big Lake, West Texas Shell Oil Co.'s Nesa 1, Long Beach, California	8,046 8,523 9,280
1930 1931	Standard Oil Company of California's Mascot 1, Midway, California Chansler-Canfield-Midway Oil Co.'s Hobson A-2, Rincon field, Ventura County, Calif.	9,753 10,030
